

” MOBILITY IS A BASIC HUMAN NEED. ”

ARISTHODOS
— THE BETTER WAY

SHAPING THE FUTURE OF MOBILITY

Mobility is the buzzword of our time: it is the key to a functioning society, responsible for a flourishing economy - and the basis for a global, agile culture. We have made it our mission to optimally shape the future of mobility together with you.

In times of climate change and energy optimisation, mobility is now more than ever at the centre of change. The technical achievements of the last decades enable us to make a paradigm shift in mobility today: Alternative drives, digitalisation and predictive maintenance are the topics that determine mobility now and in the future. A challenge for each of us, because finding the optimal path through this new world is not easy. We at ARISTHODOS have made it our task to support you in these times of upheaval with our know-how and to find the best way.

WE FIND THE BETTER WAY

Minimising mobility-related environmental impacts, optimising the capacity of existing infrastructure, making investments sensibly and at the same time improving the availability and safety of our transport systems. For us, this is the future of mobility - and the way to get there is our task. For us, holistic, cross-modal thinking and action is necessary. This is the only way to achieve a sustainable solution to reduce mobility-related emissions, increase the efficiency of transport systems and improve safety.

With this in mind, we develop solutions that pave the optimal way for you to get there.

A CLEAN SOLUTION

Fuel cells or lithium-ion batteries: Whether buses, trains, trucks or cars, the changeover and conversion to alternative drive technologies has begun. But for whom is a conversion worthwhile, for whom a completely new acquisition? We at ARISTHODOS are here to support you with our team of experts and not only check the feasibility of converting a vehicle to zero emission from a technical and economic point of view, but also accompany you in the implementation of conversion projects.

THE
FUTURE
OF
MOBILITY

RELIABLE - AND DEPENDABLE

Thinking and acting with foresight - we can do this thanks to our team and our network of diverse experts. Your benefit as a customer is in the foreground: tailored to your needs, we combine the appropriate team of experts.

In the case of predictive maintenance, the IT experts from the ARISTHODOS network support you in having the right solution ready at the right time, in the right place: They help you to collect, transfer and evaluate mobility data in order to provide the right information to the right decision-makers when it is needed.

DIGITAL - BUT OPTIMAL

For some, digitalisation, or digital transformation, is simply the transfer of a tried and tested business model into the digital age. For others, it is an opportunity to develop completely new business models. For us, digitalisation is an opportunity to look at aspects in a fundamentally new way. The focus is always on the question: Does digitalisation create added value? For example, will operations become more effective? Does it increase the level of security? Or customer satisfaction increased? Only then do digitisation and the process of digital transformation make sense from our point of view.

ARISTHODOS - MORE THAN A TEAM: AGILE, OPEN AND A THINK TANK

ARISTHODOS comes from ancient Greek and means „the best way“. This is the basis for our thinking and actions - entirely in the interests of our clients. Our team consists of a core team of engineers, lawyers, tax advisors, business economists and business development experts, supported by a flexible network of various experts. Depending on your needs, we can react quickly and agilely and look at problems from different perspectives with an individual, tailor-made team of experts. Due to the flexible team composition, we can offer you the perfect match for the development of a holistic solution - all in the spirit of working together with you as partners. We are supported by our TIC professionals, who are very familiar with testing, inspection and certification. In this way, solutions can be implemented with letter and seal.

However, progress knows no pause - and new developments bring with them other possibilities. This requires openness and agility - and that is exactly why we do not rest on our experience, but are available as a think tank platform to all those who want to tackle rethinking and break new ground.

Because that is what ARISTHODOS stands for: We will find the better way for you.
